Re: Planisware Configurator / Developer, Automotive Product Development (Warren, MI)

Hello,

Your posting describes a move from internally developed planning systems to a SaaS Planisware platform: vehicle engineering timing plans, portfolio and project management, resource planning and PMO processes, at a client site on Edward Cole Boulevard in Warren. I live in Warren, about 10 minutes from the address.

My platform migrations taught me one lesson. The load is the easy part. The expensive part arrives in the first review meeting, when the loaded data disagrees with what the owner believes. So I built Redline, a pre-load check for timing plans, on labeled sample data: ten rules for gates, dependencies, calendars, keys, capacity, budgets and required fields, each written in TypeScript and again in SQL with a test proving both agree, a findings ledger, a load gate, and UAT scenarios generated from the rules. **mousabatarseh.com/solize-proposal**

I have no Planisware hours yet and no Planisware certification, and I write JavaScript and TypeScript, not Java. I would rather say so up front. What I bring is seven years configuring Shopify, WooCommerce and WordPress stores, catalogs of 14,000+ SKUs, migrations with redirect maps, and the habit of proving a configuration with tests before anyone relies on the result.

My resume is attached with this letter, and both sit on the Attachments sheet of the site. I would welcome a conversation about how the first sprint would run.

Thank you for reading.
